

MYSON LAUNCHES NEW HEATING PRODUCTS CATALOGS

Myson Offers European-style Towel Warmers

Myson's new 32-page catalog offers more towel warmer choices than ever before. Through years of innovation, Myson Towel Warmers make beautiful fashion statements with their elegant and functional designs and a choice of over 1200 colors and high quality finishes. Throughout this new catalog, you will discover a diversity of models and styles in three glamorous new Collections: Classic, Traditional and Contemporary (available in hydronic and electric, UL or ETL approved). Myson's new advanced smart-thermo control electric heating element offers self-regulating temperature control, saving up to 35% in energy and providing an efficient way to warm lots of towels and the room as well. Discover for yourself the Myson Towel Warmer... a lifestyle choice that makes a difference day after day, year after year.

Myson Radiators – Heating through Innovation

Myson combines imagination and European tradition in the new 2008 catalog. You'll find a full array of innovative heating products for your home, bath and spa of any size, retirement home or wherever your needs are more than just heat. Myson Radiators are available in five different style groups, including the popular Select Steel Panel Radiator; the T6 IVC with its Internal Valve Control; the LST Low Surface Temperature style for sensitive locations; the contemporary Column Radiator; and the Décor Flat Panel. With Myson, heating doesn't have to be ordinary. This new expanded range is manufactured to exacting standards for quality, reliability and long life.

For more information, go online at www.mysoninc.com or contact Myson at 800-698-9690.

The Dependable Heating Solution – Myson Fan Convectors

Myson Fan Convectors are designed to provide heat in a minimum of space using forced convection. This new catalog details Myson's efficient tangential fan design which forces air uniformly across a low pressure drop heat exchanger, resulting in a high heat output from a very compact space. It's a bold claim, but true. Myson Fan Convectors deliver more heat from a hot water tube or electric element than any other heating product. That's because the fan, blowing across the heating source, transfers up to 100 times more heat to the air than is possible from units that rely on radiation or natural convection. Complete product and technical details in this new catalog.
